# GAR Commercial Heifers

The GAR commercial heifers have been Method Genetics Choice tested. Method Genetics indexes are unique. The MG database is derived from phenotypic, pedigree and genomic information supplied solely by MG customers. Over 12,000 animals that were tied or traced to GAR genetics had DNA processed with associated performance records at MG during the past year. Because the database is derived from information supplied primarily by GAR seedstock and commercial herds, the MG

genetic breeding values and indexes serve as a BENCHMARK for GAR customers. Simply put, the Method Genetics evaluation benchmarks our cattle and the cattle of our customers who participate in the MG program against one another. This is an elite population of Angus cattle selected for reproductive efficiency, calving ease, docility, postweaning growth, feedlot performance and carcass value, NOT THE AVERAGE ANGUS ANIMAL.
