Method Genetics™ Commercial is a selection tool designed for commercial cow-calf producers. Method Genetics Commercial is geared toward cowherds focused on retained ownership, emphasizing feedlot performance and carcass merit. By submitting a

DNA sample and some basic individual identification, producers receive specific trait results and a Value Based Premium (VBP) index for sorting, culling and ultimately, providing additional marketing options.

Glossary:

VBP Index:

Value Based Premium index is a retained ownership genetic selection index encompassing calf and feedlot gain, quality grade, and red meat yield. Using primary traits of average daily gain, marbling potential and ribeye area, the VBP index provides a genetic screening tool to assist in sorting or screening cattle for profitability expressed in dollars per head. A higher dollar VBP index is more favorable.

VBP Rank:

The Value Based Premium index is expressed as a 1 to 100 ranking with a lower rank value being more favorable. These ranks, or percentile rankings, are relative to an Angus-based commercial cattle population.

ADG Rank:

Average daily gain rank describes the relative ranking on a 1 to 100 scale, for calf and feedlot performance. Lower ranks are more favorable.

Marb Rank:

Marbling score genetic potential is presented as a 1 to 100 ranking with a lower rank being more favorable.

REA Rank:

The genetic potential for ribeye area is provided in a 1 to 100 scale, where a lower rank is more favorable.

DOC Rank:

Docility is an added convenience trait with moderate heritability. A lower rank based on a 1 to 100 scale describes cattle that tend to have a more favorable behavior.

CEM Rank:

Calving ease maternal, while a lowly heritable trait, can be used to describe more favorable genetics for replacement females calving with less assistance. Given in a 1 to 100 format, a lower CEM rank is more favorable.
