

2015 Profit Proven Gardiner-Influenced Commercial Angus Female Sale Results

For the 13th year, long-time Gardiner Angus Ranch customers presented a superior offering of GAR-influenced commercial Angus replacement females. The 2015 offering signifies a paradigm shift in availability and access to genetic evaluation tools for commercial beef producers. All Angus females in the sale were genomically tested through Method Genetics. Cattle owners received Method Genetics EPDs and indexes. Commercial cow-calf producers were, for the first time, supplied with genetic evaluation tools to make more informed decisions based on their specific needs.

40 Spring calving cows	\$98,000	\$2,450
